## Summary

---

I am transitioning from academia to industry to work as an **applied research scientist** in **machine learning**. My research area is software engineering in computer science, and I have been worked on the software quality driven development. Over the past 14 years, I dedicated to develop methods and tools for **assessing and improving software design and code quality** based on **statistics** and **machine learning** techniques. Recently, I have completed the bootcamp for the **data science** career track and performed projects specialized in **deep learning**. I have a special interest in solving user related problems and finding business impacts by leveraging big data intelligence.

## Education

---

### Korea Advanced Institute of Science and Technology (KAIST)

Ph.D., COMPUTER SCIENCE

Daejeon, South Korea

Feb. 2007 - Aug. 2013

### Korea Advanced Institute of Science and Technology (KAIST)

M.S., COMPUTER SCIENCE

Daejeon, South Korea

Sep. 2004 - Feb. 2007

### Sogang University

B.E., COMPUTER SCIENCE

Seoul, South Korea

Feb. 2000 - Feb. 2004

## Projects

---

### Sentimental Analysis of Movie Reviews using a Deep Learning Neural Network (Springboard)

Mar. 2019 - Jul. 2019

- Built the Convolutional Neural Network (CNN) deep learning models using Python with Keras for classifying the sentiment expressed in texts of movie reviews as positive or negative
- Compared various models by observing the parameters affecting the performance in accuracy and discussed the overfitting

### Prediction of Scores for Public Schools in California (Springboard)

Oct. 2018 - Jun. 2019

- Applied data science-related techniques for data wrangling, exploratory data analysis, data visualization, and machine learning modeling
- Provided the prediction models using the regression and classification algorithms for finding the inferior schools that need help

### Verification via Context-Aware Testing (Korea University)

Sep. 2014 - Aug. 2015

- Developed the test case generation algorithm that generates execution contexts for testing mobile applications
- Used the permissions for inferring the resources used for running Android applications
- Generated test cases by permuting different resource conditions and prioritized the test cases by weighting the criticality of each resource

### Recommendation for Software Design Quality Improvement (Korea University)

Sep. 2013 - Apr. 2018

- Developed an efficient refactoring recommendation system to help software developers make code changes easier
- Developed a fast refactoring candidate assessment method for measuring maintainability using the matrix computation in order to increase the efficiency of the heavy computation when evaluating a large number of refactoring candidates
- Devised the two-phased assessment approach to improve the efficiency of the refactoring selection process by the search space reduction
- Compared to the no-reduction approach and showed that our approach could be 13.5 (max) times faster in time

### Bad Smell Detection for Refactoring Candidate Identification (KAIST)

Sep. 2011 - Aug. 2013

- Defined a bad smell (e.g., Feature Envy) detection algorithm to identify refactoring candidates in most frequently used or really in use
- Used the dynamic-profiling technique for extracting run-time information when building the traceability relationships of software entities

### Detecting Implied Scenarios (KAIST)

Mar. 2010 - Aug. 2011

- Developed the algorithm for detecting implied scenarios (i.e., unexpected behaviors in design models) deviated from the specifications
- Used the model checking technique between synthesized scenarios and the properties extracted from the contract specifications
- Developed the modeling technique using partial orders for analysis of large scale systems without state explosion problems

### Change Proneness Prediction (KAIST)

Mar. 2006 - Feb. 2010

- Built a change-proneness prediction model using multiple linear regression to help developers to identify software components that are likely to change and modify them for the better design
- Developed the new behavioral dependency metrics to capture the dynamic aspects of the program
- Increased the model accuracy (R-square) by 8% over the model using only program structural metrics

# Experience

---

## Springboard

DATA SCIENCE CAREER TRACK FELLOW (DEEP LEARNING SPECIALIZATION)

Oct. 2018 - Aug. 2019

- Mastering skills in Python, SQL, data wrangling, data visualization, exploratory data analysis, and machine learning, and deep learning methods
- Performed two data science-related capstone projects:  
“Prediction of Scores for Public Schools in California” and “Sentiment Analysis of Movie Reviews using a Deep Learning Neural Network”

## Korea University

Seoul, South Korea

RESEARCH PROFESSOR

Sep. 2013 - Apr. 2018

- Advised graduate students to develop research topics and conduct the experiments
- Awarded \$158K in grants from the National Research Foundation of Korea (NRF) as a **sole Principal Investigator**
- Led the research projects and published the results in the top tier journals (e.g., IEEE Transactions on Software Engineering)

## Korea Advanced Institute of Science and Technology (KAIST)

Daejeon, South Korea

GRADUATE RESEARCHER

Mar. 2005 - Aug. 2013

- Mentoring and taught computer science courses: “Introduction to JAVA programming” and “Capstone Projects in CS”
- Actively performed the research projects and implemented metric measurement tools using Java and Python

## Peace Corps

Washington, D.C., USA

INTERN

Aug. 2004 - Oct. 2004

- Served in organizing and populating the intranet web pages in the Technical Infrastructure and Support Team

# Skills

---

**Data Analysis, Visualization, and Modeling:** Pandas, Numpy, Scipy, Matplotlib, Pyplot, Seaborn, Scikit-Learn, PySpark, NLTK

**Statistical Methods and Machine Learning:** Classification, Regression, Clustering, Hypothesis Testing, Keras, Tensorflow, Deep Learning

**Programming Languages and Tools:** Python, SQL, Java, R, UML, Fortran, Assembly, Markdown, Latex, SPSS, Jupyter Notebook, Visual Studio Code

**Research Areas:** Software Engineering, Software Quality Driven Development, Change Impact Analysis, Metrics, Software Quality Assessment, Software Design Improvement, Refactoring, Design Patterns, Prediction, Optimization, Natural Language Processing

# Honors and Awards

---

2014 - 2017 **Individual Basic Science Research Grant**, National Research Foundation of Korea (NRF), **Principal Investigator**, **\$125,000**

2016 **Best Paper Award**, Software Engineering Society of Korean Institute of Information Scientists and Engineers, **Prize: \$1,000**

2013 - 2014 **Post-Doctoral Fellowship Grant**, National Research Foundation of Korea (NRF), **Principal Investigator**, **\$33,000**

2011 - 2012 **SAMSUNG Graduate Fellowship**, SAMSUNG Electronics by Video Display Division
